Interphone - the 'must have' Bluetooth helmet communicator

Whether you're new to motorcycling, an experienced long-distance tourer, or a 'born again' sportsbiker, you will have wondered from time to time about the possibilities of communicating with others whilst on the move.

Wired intercoms for motorcycles have been available for many years, and can provide effective rider-pillion interaction. The more sophisticated versions can also attach to mobile phones and radios, providing longer-range communication, including bike-to-bike. The downside of all these systems is the cost and, complexity of all of those plugs and sockets, especially when exposed to the elements and rough handling we all experience on a bike.

Imagine the convenience if you could achieve everything you need with a low cost, completely self-contained wireless unit that simply attaches to any kind of helmet in minutes and gives fantastic audio performance. Through the technical mystery of 'Bluetooth' this is now possible.

Based on a specification developed for a major motorcycle manufacturer who wanted 'the world's best intercom', in partnership with Cellular Italia - a major producer of mobile phone accessories and Bluetooth headsets, 'Interphone' has been available in the UK for over a year. **Interphone** is the world's first wireless intercom with all these features:

- Bluetooth® Wireless Technology (secure, one-to-one, encrypted channels)
- Hands-free Phone Operation - using voice dialling capability of phone
- Voice Activation of Phone - for answering on the move
- Wireless Intercom - Rider-Pillion or Bike-to-Bike (typically over 150 metres, up to 500 metres)

Bluetooth® Module

Multi-function Button

- On/Off - pairing - answer - call
- Voice dial - end call - reject call
- Hands-free/Intercom switch

Volume Up/Down

Multi-function LED

- Shows Operation Mode & Battery Level

Ultra-slim Speaker

Microphone on Flexible Boom

- with foam windscreen

Mounting Bracket/Clip

- GPS compatible - listen to your GPS directions
- Full-duplex communication with DSP and noise filtering - natural 2-way conversation
- Microphone with anti-wind & anti-noise filter
- Automatic volume control - according to speed and background noise
- 'Turbo' setting - for noisy applications
- Excellent performance to over 70 mph
- Waterproof
- Rechargeable Lithium battery - giving up to 7 hours talk time (charger included)
- 12 Month 'no-quibble' Warranty
- 2 mounting brackets - to suit any helmet

And, whilst we don't endorse the use of a mobile phone when riding, it's astonishingly useful to be able to stop to make a quick call without having to remove helmet and gloves.

The benefits of a full-duplex wireless intercom to your pillion are pretty obvious, but the facility to clearly warn your riding buddy about a road hazard or that you're lost or need petrol is a real boon.

Interphone now provides a solution for those who thought motorcycle intercoms were a nuisance and a waste of time:

- city commuters - who need access to their phone
- despatch riders - access to phone & GPS info
- sportsbike riders - can now chat to each other on the move, hassle-free
- advanced instruction - secure private channel (no one else can hear the criticism...)
- track day enthusiasts - ideal for one-to-one coaching (even does 'ship-to-shore')
- trail riders - incredibly useful for navigation and hazard warning
- adventure tourers - it's even been used on the Touareg Rally in Morocco, and found to be 'indispensable' (Nick Plumb)

At £149.99 each (or £275 for a pair) 'Interphone' is available from all good dealers
